

Statistical Learning: Project Guideline

October 14, 2025

Rubric

Your written report will be graded based on the following guidelines.

- Description of the problem, including a precise mathematical formulation [5 points]
 - Is the description correct and clear, with well-defined notation?
 - Do they cite the paper appropriately?
- Description of the models, methods or algorithms [10 points]
 - Is the description correct and clear, with well-defined notation?
- Empirical evaluation of methods [10 points]
 - Are the chosen metrics appropriate to evaluate the method?
 - Is the dataset appropriate for the method?
 - Do they tune hyperparameters where appropriate?
 - Are the results interpreted appropriately? (Did they interpret results, or just report metrics)
- Discussion of advantages / disadvantages of the model/method/algorithm [10 points]
 - Is the discussion reasonable?
 - Do they reference other papers/methods appropriately?
- Overall [5 points]
 - Did the students implement the method themselves where appropriate? Did they conduct a literature review where appropriate?
 - Was it an ambitious project? Did the students go above and beyond?
 - Does the paper read well as a cohesive whole?
